

### Integrated body protecting the high performance and high functions

- > Outstanding rigidity, high dust-proofness and water-proofness suitable for severe environments and working conditions
- > No-Load High-Speed Function
- > Simply-structured integrated body with less component parts
- > Dust-proof and jet-proof body (IP55)

Combination of idea and technology materializing light-weight size

### Meticulous inverter dedicated design

- > Fully miniaturized mechanical parts taking into account inverter-based smooth start and stop
- > Transformer-free structure based on the inverter DC power
- > Thermal protector-free structure based on the electronic thermal system

Double safety mechanism preventing the accident at the occurrence of abnormal load

### Equipped with a friction clutch and electronic overload limiter

- > The friction clutch prevents breakage of the hoist body and load chain at the occurrence of abnormal load such as an overload and lifting an anchored object.
- > The electronic overload limiter detects an overload with the inverter and stops operation immediately.

# Shutting off the current to the motor at the time of excessive lifting/lowering to prevent an accident

- > The upper-lower limit switch prevents damage on the hoist body and load chain at the time of excessive lifting/lowering.
- > Simply-structured upper-lower limit switch considering reduction of dead space

### Meticulous long-life design

- > Motor with an ingenious external cooling fan  $\,$
- > Oil bath lubrication type gear box
- > Optimumly shaped motor frame fins and fan cover
- > Intermittent rating 40/20% ED

Suitable for severe environments and working conditions

### Simple design with Grade M6

### World-class KITO original chain

Superstrong nickel-plated load chain

- > Highly enhanced fatigue and wear resistance due to ingenious technology
- > Special alloy steel quenched chain with high strength, durability and accuracy

### Visual indication of maintenance timing

- > Capable of showing the number of starts of the hoist and the hoist's total on-time in the Data Display, allowing maintenance and inspection according to the frequency of use.
- > Capable of controlling the inspection and replacement timings of component parts, etc. to suggest a maintenance plan for safety operation.

### Shutting off the motor circuit in case of emergency

- > Capable of shutting off the motor circuit at hand by pressing the emergency stop button.
- > Originally designed easy-to-operate push button switch based on ergonomics
- > 24 V DC operating voltage for higher safety

Higher work efficiency of the inspector

### **Higher maintainability**

- > Easy removal of a suspension eye by installing a connecting shaft at the upper part of the body
- > Centralized control by the inverter minimizes the number of electric parts and equipment and minimizes replacement parts.

### **Environmentally friendly**

- > Free from 15 environmentally hazardous substances specified by KITO, including 6 European RoHS directive substances
- > Lower noise during operation and braking due to a 4-pole motor and pull-rotor brake

### Structure and Features

### Safe and Durable Structure with High Maintainability

### **Environmentally friendly**

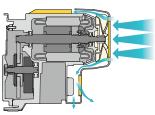

KITO-specified 15 environmentally hazardous substances, including 6 European RoHS directive substances, are not used. Noise during operation and braking has been reduced by using a 4-pole motor and pull-rotor

#### Safe and reliable brake structure

A drum brake stops a load unfailingly.

### Temperature rise inhibition by the cooling fan

The fan attached to the end of the motor shaft feeds the cooling air to the body, motor cover and regenerative resistors to prevent the temperature rise of the hoist body during operation

### Low-noise gear mechanism

### Gear box

resistance of the gears as well as a cooling

### **Chain container**

Durable plastic containers as standard.

### Nickel-plated chain

### World-class superstrong load chain

quenched chain developed by long years of research. The load chain is produced through the fully automated production facilities from material-loading to completion under high quality control. It has the hard surface to enhance wear resistance and is well-balanced between its strength and toughness in the core section. It is excellent in strength, durability and

Even if overloaded, the bottom hook is only gradually deformed and does not break. A notched skid-free hook latch has enhanced its durability.

### Suspension eye connectable to any part

Use of a suspension eye allows applications to various usages.

Thin, light-weight

\* 3 and 5 buttons only

push button switch

Newly developed minute current type push

power. Compact design for easy grasp.

button switch responds to the 24 V DC inverter

### **Connecting Shaft**

An access section to the connecting shaft is installed outside the body so as to easily remove the suspension eye.

### Aluminum die-cast body

The body and motor frame have been integrated to make the entire body tough and compact.

#### **Enclosure**

Dust-protected and jetprotected (IP55)

### **Inverter incorporated functions**

The CH meter (counter/hour meter) function incorporated in the inverter allows you to check the number of starts of the hoist and the hoist's total on-time, and carry out maintenance and inspection according to the frequency of use.

An electronic overload limiter is provided to make the inverter detect an overload and stop lifting operation.

The inverter detects the load condition, and if there is no load, a no-load high speed function is activated to automatically switch to high speed operation.

### **Friction clutch**

Originally developed as ar emergency overload protection by KITO to slip the force from the motor in such lifting an anchored object.

### **Upper-lower** limit switch

Triple safety mechanism

combined with the friction clutch and electronic OLL. The circuit is shut off at the time of excessive lifting and lowering. \* This is for emergency. Do not use it regularly.

### Chain guide

KITO's uniquely-structured for smooth

Use of helical gears greatly reduces operating

Lubrication by the oil bath enhances wear effect.

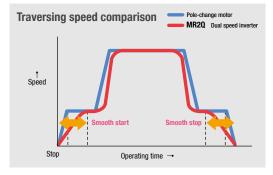

KITO's original chain with high toughness and fatigue strength has been plated with nickel. It has excellent wear resistance.

This is KITO's original special alloy steel

### Hook with skid preventive hook latch (Bearing contained)

# **Smooth & Ergonomic Operation**

# Lifting speed comparison Pole-change motor EQ Dual speed inverter High Adjustable low speed Low Low Smooth start Smooth start Smooth start Smooth start Smooth start Smooth start

Accelerating and decelerating time in addition to speed are adjustable for dual speed inverter trolley.

### Inverter

### smooth transitional speed

The dual speed inverter delivers smoother movement than the pole change motor, reducing load swing. The high to low speed ratio can be set to a large value. This results in smooth starts, improved low speed stops, and improved positioning accuracy. The standard speed ratio is 6:1.

A No-load High-Speed Function is equipped as standard feature, allowing its hoisting speed, 1.3 times faster during no-load operation. When the no-load condition is detected by the inverter, this function is activated automatically to switch to high speed operation, leading to improving the work efficiency with ease and safety. This function is easily activated (ON/OFF) with the push button control.

EQ/MR2Q inverter unit is well-customized for lifting/traversing applications including exclusive software with optimum control and is also provided with measures against impact and heat which were verified through long run tests.

### Push button control original design

The push button control is designed in an ergonomic shape that is operator friendly. Seeking ease of operation and universal design, KITO's original push button control is designed and manufactured based on trial and error repeated many times, in particular, upgrading prototypes and evaluation from an enduser point of view especially with respect to unit strength.

### **Reliable Safety**

### Electronic overload limiter & friction clutch & upper-lower limit switch triple safety

Maintaining safety is the most important task for lifting equipment, and is essential for stable operation. To ensure safety, KITO utilizes a triple safety mechanism consisting of an originally developed electronic overload limiter and friction clutch and upper-lower limit switch. When the inverter detects an overload, the electronic overload limiter turns off the power to the motor to stop lifting the load.

The friction clutch is an emergency overload protection device that idles the motor when subjected to an excessive load over the rated capacity. Friction clutch performance is not easily compromised with changes in the surrounding temperature.

In the case of irregular loading, this operates in advance to prevent the hoist body or load chain from being damaged.

In the event that a load is lifted or lowered excessively, the limit switch stops the motor, preventing hoist or load chain damage. (Not regular use)

### **Electronic thermal protector**

To prevent the motor from burning out due to excessive usage, a standard thermal protector is installed in the inverter.

### Pull rotor type drum brake

With a rotor and pull rotor incorporated in the motor, this is a cone type drum brake which is released at the time of operation. When the power is shut off, the brake is activated, ensuring safety.

### **Emergency stop**

The emergency stop, provided as standard, allows the motor power to be disconnected in an emergency without cutting off the main power supply.

### **Easier Maintenance**

### Connecting shaft & suspension-eye

The connecting shaft mounted on the outside of the EQ.

This allows a suspension-eye to be attached or removed with ease.

### CH (counter hour) meter

As a standard feature, the hoist's total on-time and the number of moving starts are shown on the Data Display of the Inverter.

This enables the user to carry out maintenance based upon the frequency of use.

By maintaining a history of the CH meter data, the inspection periods and replacement periods for gear oil, brakes and load chains can be efficiently controlled, allowing the equipment to be used with confidence.

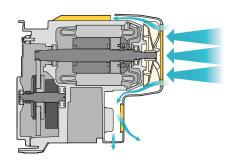

### **Enhanced Durability**

### **High end duty rating**

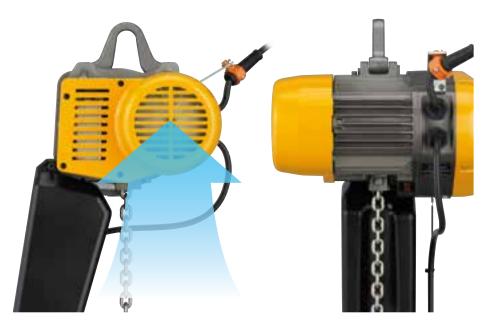

The EQ achieves M6(ISO)/3m(FEM) class (refer to section of "Hoist Classifications"), with a duty cycle of 40/20% ED. Supporting use in the most demanding environments and conditions, this long service lifed hoist is a heavy-duty product which is also applicable to high frequency or long lift operations.

The gearbox is lubricated in an oil bath. As a result of this, wear and tear has been improved and cooling has also been enhanced at the same time.

### Unique motor frame fins & fan cover

A unique fan-cooled motor with motor frame fins and a fan cover have been configured into a purpose built design. This design produces a much quieter motor unit as well as enhanced fan cooling capabilities.

### Load chain super strength

KITO's world class original supperstrength nickel-plated load chain certified by German Institute, uses unique technology to greatly increase resistance to fatigue and wear. At KITO, testing is continuously being carried out regarding the load chain fatigue, wear, tensile strength, and environment. KITO takes pride in manufacturing load chains that have strength, durability and accuracy for utilization in the product.

### **Environmentally Friendly**

### No hazardous substances

As an environmental measure, several environmentally hazardous substances specified by KITO, including 6 European RoHS directive substances, are not used.

### Lower noise

The utilization of the inverter, 4-pole motor as well as the drum brake, reduces the noise during operation and braking.

# **Trolleys**

### **Motorized Trolley MR2Q**

Bearing built-in side rollers provide smooth running through the minimum radius curve and excellent traversing performance with preventive derailment.

### **Features**

- •Simple gear box construction
- Speed variations
- Dual Speed

### **Plain & Geared Trolley**

- •Designed to provide smooth and easy traversing.
- •Lugs provide protection from striking damage against rail stoppers, and from falling off the rail.
- Wheel flanges also prevent derailment.

### **Plain Trolley TSP**

Designed for light load manual applications (125kg-1t)

### **Geared Trolley TSG**

Designed for precise positioning and traversing by using hand chain (125 kg-1t)

### **Technical Documents**

### Electric Chain Hoist (EQM) Rated Currents

### For lifting

	Motor		Rated cur	rent (A)	
Туре	output	200-2	230 V	380-	460 V
	(kW)	50Hz	60Hz	50Hz	60Hz
EQ001IS	0.5	E	1	0	0
EQ003IS	0.5	5	.1	2	.0
EQ005IS	0.75	6.	.3	3	.3
EQ010IS	1.5	10	1.5	5	.5

### For traversing

Motor		Rated cu	ırrent (A)	
output	220-	230 V	380-	440 V
(kW)	50Hz	60Hz	50Hz	60Hz
0.4	3.	.5	2.	.5

Note: MR2Q is designed for 220-230V or 380-460V.

# Power Supply Cable Allowable Lengths (EQ + MR2Q)

See the following table for the standard power supply cable allowable lengths and sizes. When using the cable of other size than those mentioned in the table, determine the cable length by the right formula.

Allowable length (m) = 
$$\frac{1000}{30.8} \times \frac{\text{Cross-sectional area of}}{1 \text{ core wire (mm}^2)} \times \text{Rated voltage (V)} \times 0.02$$
Rated current (A)

Note: MR2Q is designed for 220-230V or 380-460V.

			Singl	le EQ				EQM co	mbined	
Туре	Cable size		Rated cu	rrent (A)		Cable size		Rated cu	rrent (A)	
турс	(mm²)	200-	230 V	380-4	460 V	(mm²)	220-	230 V	380-4	440 V
		50Hz	60Hz	50Hz	60Hz		50Hz	60Hz	50Hz	60Hz
EQ001IS		3	31		10		3	3	9	3
EQ003IS	1.25	(5	(50)		76)	2	(5	(8)	(16	62)
EQ005IS	(2)		25 (41)		13 49)	(3.5)	2 (5	951)	8 (1 <sup>2</sup>	5 48)
EQ010IS			15 (24)		6 9)		2 (3	(0 (5)	6 (10	1 07)

Note: Parenthesized values denote the size one rank above the standard one.

For customers considering using the product with a 460V power supply, please contact the nearest KITO dealer.
